

Pro Audio Solutions

One-Channel XLR Isolation Transformer

USER MANUAL

XIT-600

Thank you for choosing Kopul.

The Kopul XIT-600 is a passive audio isolator that eliminates ground loop hum and noise when it's placed in-line on your signal chain. Use it with balanced and unbalanced signals, following the diagrams below.

Making Connections

Before connecting the XIT-600 to your audio gear, turn down or turn off the volume. This prevents damage to speakers and headphones due to sudden power jumps.

ONE-YEAR LIMITED WARRANTY
